(note 1) The data reported in this PO is based on information provided by the issuer and may include certain assumptions made by Moody's. Moody's accepts no responsibility for the information provided to it and, whilst it believes the assumptions it has made are reasonable, cannot guarantee that they are or will remain accurate. Although Moody's encourages all issuers to provide reporting data in a consistent manner, there may be differences in the way that certain data is categorised by issuers. The data reporting template (which Issuers are requested to use) is available on request.

(note 2) Based on the current TPI, this is the number of notches an "Issuer Rating" (as defined in Moody's Monitoring Overview) can be downgraded before the covered bonds are downgraded.

(note 3) The "Collateral Risk" combines the Collateral Score post haircut (if any) for eligible and ineligible (if any) assets which Moody's gives value to in the cover pool. The Collateral Risk considers only the credit deterioration of the Cover Pool and here excludes certain related legal risks, such as set off. Market risks include refinancing risk, currency and interest rate mismatches and certain collateral related legal risks.

(note 4) Committed OC means that the issuer should not have discretion to remove it without negative consequences under the law or otherwise. Any other OC is regarded as "not committed".

(note 5) This assumes the Covered Bonds rating is not constrained by the TPI. Also to the extent rating assumptions change following a downgrade or an upgrade of the Issuer, the necessary OC stated here may also change. This is especially significant in the case of Issuers currently rated A2 or A3, as the necessary OC following a 1 notch downgrade may then be substantially higher than the amount suggested here as market risks are considered more critically by Moody's at this time. In any event, the necessary OC amounts stated here are subject to change at any time at Moody's discretion.

(note 6) This is the minimum OC calculated to be consistent with the current rating under Moody's expected loss model. However, the level of OC consistent with a given rating level may differ from this amount. Reasons for such differences include: i) committee discretion; and ii) TPI considerations.

(note 7) Based on principal flows only. Assumptions include no prepayments, principal collections limited to the portion of assets that make up the amount of the liabilities plus committed OC, no further CB issuance and no further assets added to the cover pool.

(note 8) This assumes no prepayment.
